

Module Board

A guide to planning your NUS degree

Add a course by its code and the board pulls its name, units, workload and prerequisites from NUSMods. Lay those courses across your semesters, tell each one what it counts toward, and the board keeps score: units per bucket, hours per week, prerequisites in the wrong order, and a checklist of everything still outstanding.

An initiative of medhanshkhemka — a side project made to help fellow students. Not an official NUS or NUSMods product. Always verify against NUSMods and EduRec.

The board at a glance

Everything lives on one screen: what you must take on the left, when you'll take it in the middle, and whether it all adds up at the bottom.

The Module Board interface is a comprehensive tool for managing course selections. It features a top navigation bar with a search input (1), a dropdown for the academic year (2), a toggle for light/dark theme (3), and a units counter (4). The main area is divided into several sections: Requirements (5), a grid of course cards for each semester (6-7), and a Graduation Checklist (8). The left sidebar contains category rules, second majors/minors, and specialisations. The bottom right shows a summary of the degree progress.

1 Type a course code — CS2040S, BT1101, GE5S1025

2 2025-2026

3 NUSMODS 2025-2026

4 16 of 160 units placed

5 REQUIREMENTS

6 NOT PLACED YET · 2

7 Year 1 · Sem 1, Year 1 · Sem 2, Year 2 · Sem 1, Year 2 · Sem 2, Year 3 · Sem 1, Year 3 · Sem 2, Year 4 · Sem 1, Year 4 · Sem 2

8 GRADUATION CHECKLIST

- 1 Type any course code here. Almost everything starts in this box.
- 2 The academic year the course data is pulled from. Change it if you're planning against a different one.
- 3 Switches between light and dark.
- 4 Units on the board against your degree total.
- 5 Requirements — every bucket, its target, and how far along you are.
- 6 Courses you've added but haven't placed in a semester yet.
- 7 One card per semester: eight of them in a four-year degree.
- 8 The graduation checklist, recalculated after every change.

The top bar

Adding courses, choosing the data year, and undoing mistakes.

The screenshot shows the top bar of the Module Board interface. It includes a search bar at the top right, a course code input field on the left, a year dropdown, a data source selector, an undo button, and a units placed summary.

1. Search bar: A text input field with a plus sign icon and placeholder text "Type a course code – CS2040S, BT1101".

2. Course code input: A text input field containing "GESS1025".

3. Year dropdown: A dropdown menu labeled "Year" with the selected value "AY2025-2026".

4. Data source selector: A button with a green dot and the text "NUSMODS 2025-2026".

5. Undo button: A button with a circular arrow icon and the text "Undo".

6. Units placed summary: A dark blue rounded rectangle containing the text "116 of 160 units placed".

- 1 Type a code — CS2040S, GESS1025 — then pick from the list or press Enter. Codes that aren't in the list can still be added by hand.
- 2 The academic year course data is fetched for.
- 3 Green means NUSMods data loaded. Orange means the board couldn't reach it and is running on a small built-in list — you can still add courses and fill in the details yourself.

- 4 Light or dark. Your choice is remembered on this browser.
- 5 Undoes the last change. Ctrl / Cmd + Z does the same.
- 6 Total units placed against your degree total.

Adding a course

Type two or more characters and the matching courses appear. Pick one and the board fetches the rest.

The screenshot shows the NUS Module Board interface. At the top, there's a search bar with the text "NUS · units, workload, requirements" and a dropdown menu showing "+ CS20". Below the search bar, a list of suggestions is displayed, with "CS2030S Programming Methodology II" and "CS2040S Data Structures and Algorithms" highlighted. To the left of the suggestions, there are two progress bars: one for "Program" (24 / 24) and one for "Units" (40 / 60). At the bottom, there are three tabs for "Year 1 · Sem 1", "Year 1 · Sem 2", and "Year 2 · Sem 1".

The screenshot shows the "NOT PLACED YET · 2" section of the NUS Module Board. It contains two course cards: "UE · · · · · 2 Unrestricted elective (undecided)" and "GEX · · · · · 4u Digital Literacy". Both cards have a "GEX" button and a "SL0T" button. The "UE" card is highlighted with an orange border.

1 Start typing a code. Arrow keys move through the suggestions, Enter picks one.

2 Each suggestion shows the code and the official course name.

3 A new course lands in 'Not placed yet' with its name, units, workload and prerequisites already filled in from NUSMods. Drag it into a semester when you're ready.

Reading a course card

Each card carries the four things you actually need while planning, and flags anything unusual.

5

CD

- 1 The course code.
- 2 Units. Editable, in case your case differs from the published figure.
- 3 The official course name.
- 4 Weekly workload, split the way NUSMods splits it: lecture, tutorial, lab, project, preparation.
- 5 Flags sit along the bottom. Grey SLOT means a placeholder, blue is a GE pillar, orange is a specialisation, and DOUBLE marks a double-counted course.

The semester and its workload ruler

Unit counts tell you what you're allowed to take. The ruler tells you what it will feel like.

- 1** The semester this card represents.
- 2** Units in this semester. Turns orange past 23 units or 45 hours.
- 3** Every course's workload stacked into one bar, coloured by type.
- 4** The line marks 45 hours a week. Past it, you are planning a hard semester.
- 5** Total contact and preparation hours for the semester.
- 6** Tags this term as an exchange, NOC, leave or anything else — see later in this guide.

The course drawer

Click any card to open it. This is where a course is told what it counts toward.

▼

Targets sum to 172 units; 4 are double-counted so far. Double-counted units credit two buckets but count once toward the 160.

- 1 The bucket name.
- 2 Its unit target. Click the number and change it to whatever your programme actually requires.
- 3 How much of that target is already on the board.
- 4 Category rules for this bucket, showing where you stand against each one.
- 5 Your degree total. 160 units for most four-year honours degrees.
- 6 Programme length. Changing it rebuilds the grid and returns any orphaned courses to the tray.

Second majors and minors

Add as many as you're attempting. Each one gets its own bucket, its own placeholder chip and its own checklist row.

SECOND MAJORS & MINORS + Add

1 2nd major ▾ 2 Statistics ×

3 units 40 · double-count cap 4 16

- 1 Second major or minor.
- 2 Its name — Statistics, Economics, whatever you're reading.
- 3 Units required. Second majors usually ask for around 40, minors around 20.
- 4 The double-count cap. The board warns you when the units you've double-counted exceed it, but it won't stop you — the real limit depends on your particular pairing, so check it with your faculty.

Category rules

For requirements written as a mix rather than a number — 12 units of CD/ID, at least 2 of them ID, at most 1 CD.

2 now

For requirements written as a mix — "12 units of CD/ID, at least 2 ID, at most 1 CD". Courses whose code starts with the tag are matched automatically.

- 1 The tag. Courses whose code starts with it are matched automatically, so CD2101 picks up the CD tag on its own.
- 2 What you call it.
- 3 Which bucket the rule applies to.
- 4 The minimum number of courses. Set ID to 2 and the checklist won't clear until you have two.
- 5 The maximum, if there is one. Leave it blank for no limit. Setting CD to a maximum of 1 makes '1 CD + 2 ID' and '3 ID' both valid, and '2 CD + 1 ID' fail.
- 6 If a course belongs to a category but its code doesn't say so, tick it here by hand.

STATISTICS

ARTIFICIAL

Park a slot now, swap in the real code when you pick it.

- 1 The specialisation name.
- 2 How many courses it needs.
- 3 How many you've tagged so far. Tag them in the course drawer.
- 4 One chip per GE pillar — drops an empty slot into the tray, already assigned to the right pillar.
- 5 Chips also appear for each category rule, each second major or minor, and each specialisation.

Exchange, NOC and other terms

These happen inside a semester rather than adding one, so they're a tag on the term, not an extra block.

The screenshot shows a digital module board interface. At the top, it displays 'Year 3 · Sem 2' and a total credit count of '16u'. Below this is a search bar containing 'SEP · KTH Stockholm'. Under the search bar, there are fields for 'credits' (set to 8) and a dropdown menu for 'Unrestricted ele'. A progress bar is visible below these fields. At the bottom, two course cards are shown: 'CS3244 Machine Learning' with a '4u' credit value and an 'ARTIFICIAL' tag, and 'UE..... Unrestricted elective (undecided)' with a '4u' credit value and a 'SLOT' tag. Numbered callouts 1 through 4 point to specific elements: 1 points to the search bar, 2 points to the credits field, 3 points to the dropdown menu, and 4 points to the '16u' total credit count.

Year 3 · Sem 2 16u

3 Unrestricted ele ▼

LEC · TUT · PRJ · PRE 10.0h / wk

CS3244 4u
Machine Learning
ARTIFICIAL

UE..... 4u
Unrestricted elective (undecided)
SLOT

- 1 Name the term — SEP, NOC, an internship, leave of absence.
- 2 Units you expect to be credited back. Use this when you know the total but not the individual courses; if you do know them, add them as courses instead and leave this at zero.
- 3 Which bucket those credited units count toward.
- 4 The semester total includes them, so your degree length is unaffected.

Prerequisite warnings

The board reads each course's prerequisite tree from NUSMods and checks it against what you've placed in earlier semesters. Nothing appears when everything is in order.

Every requirement the board can see, checked after each change. Sits below the grid.

GRADUATION CHECKLIST

11 / 19

☒ Data Literacy GEA1000	☒ Cultures and Connections GEC....	☒ Singapore Studies GESS....
☒ Communities and Engagement GEN....	☒ Digital Literacy GEX....	☒ Communication ES2660
☒ Common curriculum 24 of 24 units	☐ Major core 40 of 60 units · 20 to go	☐ Programme electives 16 of 20 units · 4 to go
☒ CD / ID courses 12 of 12 units	☒ Interdisciplinary — at least 2 2 courses tagged ID · 8 units	☐ Statistics 12 of 40 units · 28 to go
☒ Unrestricted electives 16 of 16 units	☐ Artificial Intelligence 3 of 4 courses tagged	☐ Prerequisite order CS4248 placed before their prerequisites
☐ Total units 116 of 160 units on the board	☐ Every course in a semester 2 still in the tray	☒ No overloaded semester under 23 units and 45h everywhere
☐ Internship (12 weeks) your own requirement		
Add your own requirement — internship, capstone, language exemption... Pillars tick themselves when a matching course is on the board; tick any row by hand if your faculty maps it differently.		

- 1 How many requirements are satisfied.
- 2 Green rows are met. GE pillars tick themselves when a matching course appears anywhere on the board.
- 3 Red rows are problems: a breached limit, a prerequisite out of order, a double-count cap exceeded.
- 4 Add requirements the board can't know about — an internship, a capstone, a language exemption — and tick them yourself. Any row can be ticked by hand if your faculty maps things differently.

Saving, exporting and dark mode

Your plan stays on the browser you built it on. There is no account and nothing is uploaded.

- 1 Export writes the whole plan to a JSON file. Do this regularly — clearing your browsing data erases the board.
- 2 Import restores an exported plan, on this browser or another one.

- 3 Clear empties the board. There's an undo if you didn't mean it.
- 4 Dark mode redraws every surface, including the workload bars and the checklist states.
